

Ana Victoria Pérez

EXECUTIVE BRIEF

OCTOBER 2026

PRODUCT ENGINEER · AI-ASSISTED PRODUCT DEVELOPMENT · PRODUCT OPERATIONS

I build end-to-end digital products from real problems.

I define what needs to be built, structure product and system, lead AI-assisted implementation, test, validate and iterate. I add 13 years of operational judgement built under pressure.

18 years of professional experience	13 years in service and urban mobility operations	4 independent digital systems built	696/696 integration tests · Phase 4B checkpoint
---	---	---	---

PRODUCT ENGINEERING · EVIDENCE

AQUO

aquo.health · digital wellbeing product

Daily wellbeing platform with 112 database tables, per-user data isolation and 50+ modules.

EVIDENCE

Defined functional structure, modules, journeys, documentation and product decisions. A deliberate safety test surfaced five silent failures and led to five mandatory release checks.

NADIE

nadie-ia.netlify.app · responsible AI

Deterministic digital-exclusion risk analyser with an original taxonomy, abstention protocol, human review and deterministic controls.

EVIDENCE

177 automated tests passing + 7 end-to-end suites; a control blocks release if the product claims anything it cannot demonstrate.

Business LAB

businesslb.netlify.app · commercial product / operation

Service line taken from idea to operation: offer, pricing, funnel, payment routes, intake, automation, documentation and analytics.

EVIDENCE

A pre-launch audit found a missing payment route and resulted in an eight-point corrective specification.

STUDY_OS

adaptive study system · product engineering

Product built from zero with governed architecture, separate staging and production environments, and a technical foundation designed for continuity and traceability.

EVIDENCE

Supabase/PostgreSQL + RLS, protected GitHub main, CI, versioned migrations and integration/RLS/E2E suites. A verified Phase 4B checkpoint reached 696/696 integration tests passing.

HOW I WORK

A relevant failure does not end with a fix: it should leave behind a test, control, specification, documentation or improvement that reduces recurrence.

WHERE I FIT

Junior Product Engineer · AI Product / AI-enabled Product · Product Operations · Implementation · Technical Product · AI Operations.

TECHNICAL FOCUS

Functional architecture · requirements · Supabase/PostgreSQL · RLS · GitHub/CI · E2E testing · automation · AI-assisted development · validation.

Available immediately · remote or hybrid

4 PRODUCTS · AI-ASSISTED
